

How to transfer and push data from Roxtec Transit Designer™ into Roxtec Transit Build™/ Roxtec Transit Operate™

Connect your project in Roxtec Transit Designer™ with an asset in either Roxtec Transit Build™ or Roxtec Transit Operate™

By using this functionality, you can push data connected to the created transits from Roxtec Transit Designer into Roxtec Transit Build/Operate. You can thereby reduce the amount of work needed to set up the cable and pipe register for your asset.

Follow the steps in this document to utilize the feature.

- 1 As you create a new asset in Roxtec Transit Build/Operate, you will start with an empty asset that contains no transits and no information.

- 2 To be able to transfer transits from Roxtec Transit Designer to Roxtec Transit Build/Operate, you must invite the designers that should have access rights to do so. Go to the access table for your created asset in Roxtec Transit Build/Operate and invite those who will be working as designers for the project.

Access Table

Demo Asset (Empty) 0 change(s) Cancel Save

	?	Asset Viewer	Transit Designer	Level 1	Level 2	Roxtec Inspector	Asset Administrator
		Select all	Select all	Select all	Select all	Select all	Select all
Pontus Moberg Roxtec		<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- 3 In Roxtec Transit Designer, you can now go into any already created project or start a new one. Click the settings button.

6 Select the files you want to transfer. The marked files below are the ones available to push. Click "Push to Transit Build" to complete the transfer.

The screenshot shows a file selection interface. On the left, there are three main categories: 'Bill of material (.xlsx)', 'Transit and cable/pipe export (.xlsx)', and 'Frame models (3D .stp .rfa)'. The 'Drawing' category is expanded, showing sub-items: 'Cutout detail', 'Solution overview', 'Cable pulling and Packing plan', 'Additional solution information', 'Insulation drawing', and 'Audit log'. On the right, there are three categories: 'Certificates', 'Specification documents', and 'IFS quote'. The 'Certificates' and 'Installation instructions' categories are highlighted with red boxes. At the bottom, there are two buttons: 'Download' and 'Push to Transit Build', with the latter also highlighted by a red box. Red arrows point to the highlighted boxes.

7 Once finished, you will be able to find your pushed transits in your Roxtec Transit Build/Operate asset.

The screenshot shows the Roxtec software dashboard for a 'Demo Asset (Empty)'. The dashboard has a navigation bar with 'Dashboard', 'Transits', 'Floor plans', 'Roxtec Inspections', and 'Asset documents'. The 'Transits' section is active. The 'Transit Status' section features a pie chart with three segments: blue (33.33%), yellow (33.33%), and green (33.33%). The 'Totals' section displays the following data:

Totals	
Transits	People
3 Transits	0 Asset Viewer
6 Openings	1 Transit Designer
	0 Level 1
	0 Level 2
	0 Roxtec Inspector
	1 Asset Administrator

Activity Levels: 26 Changes last 24 hours, 114 Changes last 7 days.

8

Design specifications, certificates, and installation instructions are available. It is easy for the foreman or the installer to start working with the transits, having all necessary information at hand.
